Rim1/2

Cat.No. 140 208; Recombinant rabbit antibody, 50 µg recombinant IgG (lyophilized)

Data Sheet

Q9JIS1) Reacts with: mouse (Q99NE5, Q9EQZ7), rat (Q9JIS1, Q9JIR4). Other species not tested yet. Specificity K.O. validated Remarks This antibody is a chimeric antibody based on the monoclonal rat antibody SY-53E12. The constant regions of the heavy and light chains have been replaced with rabbit specific sequences. The antibody can therefore be used with standard anti-rabbit secondary reagents. The antibody has been expressed in mammalian cells.		
IP: not tested yet ICC: 1: 500 IHC: 1: 500 IHC-P: not recommended EM: external data Clone Rb53E12 Subtype IgG1 (k light chain) Immunogen Recombinant protein corresponding to Zn-finger-domain of rat RIM 2. (UniProt Id: Q9JIS1) Reactivity Reacts with: mouse (Q99NE5, Q9EQZ7), rat (Q9JIS1, Q9JIR4). Other species not tested yet. Specificity K.O. validated Remarks This antibody is a chimeric antibody based on the monoclonal rat antibody SY-53E12. The constant regions of the heavy and light chains have been replaced with rabbit specific sequences. The antibody can therefore be used with standard anti-rabbit secondary reagents. The antibody has been expressed in mammalian cells.		stabilization. For reconstitution add 50 μ l H ₂ O to get a 1mg/ml solution in PBS. Then aliquot and store at -20°C to -80°C until use. Antibodies should be stored at +4°C when still lyophilized. Do not freeze!
Subtype IgG1 (k light chain) Immunogen Recombinant protein corresponding to Zn-finger-domain of rat RIM 2. (UniProt Id: Q9JIS1) Reactivity Reacts with: mouse (Q99NE5, Q9EQZ7), rat (Q9JIS1, Q9JIR4). Other species not tested yet. Specificity K.O. validated Remarks This antibody is a chimeric antibody based on the monoclonal rat antibody SY-53E12. The constant regions of the heavy and light chains have been replaced with rabbit specific sequences. The antibody can therefore be used with standard anti-rabbit secondary reagents. The antibody has been expressed in mammalian cells.	Applications	IP: not tested yet ICC: 1:500 IHC: 1:500 IHC-P: not recommended
Immunogen Recombinant protein corresponding to Zn-finger-domain of rat RIM 2. (UniProt Id: Q9JIS1) Reactivity Reacts with: mouse (Q99NE5, Q9EQZ7), rat (Q9JIS1, Q9JIR4). Other species not tested yet. Specificity K.O. validated Remarks This antibody is a chimeric antibody based on the monoclonal rat antibody SY-53E12. The constant regions of the heavy and light chains have been replaced with rabbit specific sequences. The antibody can therefore be used with standard anti-rabbit secondary reagents. The antibody has been expressed in mammalian cells.	Clone	Rb53E12
Q9JIS1) Reacts with: mouse (Q99NE5, Q9EQZ7), rat (Q9JIS1, Q9JIR4). Other species not tested yet. Specificity K.O. validated Remarks This antibody is a chimeric antibody based on the monoclonal rat antibody SY-53E12. The constant regions of the heavy and light chains have been replaced with rabbit specific sequences. The antibody can therefore be used with standard anti-rabbit secondary reagents. The antibody has been expressed in mammalian cells.	Subtype	IgG1 (κ light chain)
Other species not tested yet. Specificity K.O. validated Remarks This antibody is a chimeric antibody based on the monoclonal rat antibody SY-53E12. The constant regions of the heavy and light chains have been replaced with rabbit specific sequences. The antibody can therefore be used with standard anti-rabbit secondary reagents. The antibody has been expressed in mammalian cells.	Immunogen	Recombinant protein corresponding to Zn-finger-domain of rat RIM 2. (UniProt Id: Q9JIS1)
Remarks This antibody is a chimeric antibody based on the monoclonal rat antibody SY-53E12. The constant regions of the heavy and light chains have been replaced with rabbit specific sequences. The antibody can therefore be used with standard anti-rabbit secondary reagents. The antibody has been expressed in mammalian cells.	Reactivity	
SY-53E12. The constant regions of the heavy and light chains have been replaced with rabbit specific sequences. The antibody can therefore be used with standard anti-rabbit secondary reagents. The antibody has been expressed in mammalian cells.	Specificity	K.O. validated
ine. Anagen recirevat with distate burlet pirt of stequired.	Remarks	SY-53E12. The constant regions of the heavy and light chains have been replaced with rabbit specific sequences. The antibody can therefore be used with standard anti-rabbit secondary reagents. The antibody has been expressed in mammalian

TO BE USED IN VITRO / FOR RESEARCH ONLY NOT TOXIC, NOT HAZARDOUS, NOT INFECTIOUS, NOT CONTAGIOUS

Background

RIMs are presynaptic active zone proteins that regulate Ca²⁺ triggered release of neurotransmitters. RIM 1α and RIM 2α are composed of an N-terminal zinc-finger domain, a central PDZ domain and two C-terminal C2 domains that are seperated by long alternatively spliced sequences.

RIM 1α is a putative Rab 3a effector and has been shown to interact with other active zone proteins like Munc13-1, ERC 1b, ERC 2 and α -liprins. Deletion of RIM 1α in mice impaired neurotransmitter release without changing the structure of the synapse.

RIM 2β consists of a specific N-terminus, the central PDZ domain and the C-terminal C2 domains. The mRNA for RIM 2β is transcribed from an internal promoter of the RIM 2α gene.

Shorter variants of RIM 2 which comprise only the C-terminal C_2B domain and some flanking regions are referred to as NIM 2 / RIM 2 γ and NIM 3 / RIM 3 γ .

FAQ - How should I store my antibody?

Shipping Conditions

 All our antibodies and control proteins / peptides are shipped lyophilized (vacuum freezedried) and are stable in this form without loss of quality at ambient temperatures for several weeks.

Storage of Sealed Vials after Delivery

- Unlabeled and biotin-labeled antibodies and control proteins should be stored at 4°C before reconstitution. They must not be stored in the freezer when still lyophilized!
 Temperatures below zero may cause loss of performance.
- Fluorescence-labeled antibodies should be reconstituted immediately upon receipt. Long term storage (several months) may lead to aggregation.
- **Control peptides** should be kept at -20°C before reconstitution.

Long Term Storage after Reconstitution (General Considerations)

- The storage freezer must not be of the frost-free variety ("no-frost freezer"). This cycle
 between freezing and thawing (to reduce frost-build-up), which is exactly what should be
 avoided. For the same reason, antibody vials should be placed in an area of the freezer that
 has minimal temperature fluctuations, for instance towards the back rather than on a door
 shelf.
- Aliquot the antibody and store frozen (-20°C to -80°C). Avoid very small aliquots (below 20 µl)
 and use the smallest storage vial or tube possible. The smaller the aliquot, the more the stock
 concentration is affected by evaporation and adsorption of the antibody to the surface of the
 storage vial or tube. Adsorption of the antibody to the surface leads to a substantial loss of
 activity.
- The addition of glycerol to a final concentration of 50% lowers the freezing point of your stock and keeps your antibody at -20°C in liquid state. This efficiently avoids freeze and thaw cycles.

Product Specific Hints for Storage

Control proteins / peptides

• Store at -20°C to -80°C.

Monoclonal Antibodies

- Ascites and hybridoma supernatant should be stored at -20°C up to -80°C. Prolonged storage at 4°C is not recommended! Unlike serum, ascites may contain proteases that will degrade the antibodies.
- **Purified IgG** should be stored at -20°C up to -80°C. Adding a carrier protein like BSA will increase long term stability. Many of our antibodies already contain carrier proteins. Please refer to the data-sheet for detailed information.

Polyclonal Antibodies

- Crude antisera: With anti-microbials added, they may be stored at 4°C. However, frozen storage (-20°C up to -80°C) is preferable.
- Affinity purified antibodies: Less robust than antisera. Storage at -20°C up to -80°C is
 recommended. Adding a carrier protein like BSA will increase long term stability. Most of our
 antibodies already contain carrier proteins. Please refer to the data-sheet for detailed
 information.

Fluorescence-labeled Antibodies

• Store as a liquid with 1:1 (v/v) glycerol at -20°C. Protect these antibodies from light exposure.

Avoid repeated freeze-thaw cycles for all antibodies!

FAQ - How should I reconstitute my antibody?

Reconstitution

- All our purified antibodies are lyophilized from PBS. To reconstitute the antibody in PBS, add
 the amount of deionized water given in the respective datasheet. If higher volumes are
 preferred, add water as mentioned above and then the desired amount of PBS and a
 stabilizing carrier protein (e.g. BSA) to a final concentration of 2%. Some of our antibodies
 already contain albumin. Take this into account when adding more carrier protein.
 For complete reconstitution, carefully remove the lid. After adding water, briefly vortex the
 solution. You can spin down the liquid by placing the vial into a 50 ml centrifugation tube filled
 with paper.
- If desired, add small amounts of azide or thimerosal to prevent microbial growth. This is especially recommended if you want to keep an aliquot a 4°C.
- After reconstitution of fluorescence-labeled antibodies, add 1:1 (v/v) glycerol to a final
 concentration of 50%. This lowers the freezing point of your stock and keeps your antibody in
 liquid state at -20°C.
- Glycerol may also be added to unlabeled primary antibodies. It is a suitable way to avoid freezethaw cycles.
- Please refer to our tips and hints for subsequent storage of reconstituted antibodies and control peptides and proteins.
